Hi!

I'm Tomek.

Before I show you how we turn ideas into awesome software, I've got a little story to tell...

Tomek Korzeniowski

Founder & CEO

codequest

Big Start but Humble at Heart

It seems like ages ago when Polar Rose, a facial recognition app I helped create, was bought by Apple. Soaring high on success, I decided to take all my learnings and start codequest, my own software development agency.

While being witness to a Big Tech acquisition might be every developer's dream, for me it was all about having my own workplace where I could use the technology that I love to create **fast, functional, and beautiful digital products.**

Since 2009, I'm proud to say we've helped over seventy-five startups, SMBs, and legacy companies excel in their markets.

You might be wondering how we did this. Well, here's a little something from our codebook 😊

codequest

hello@codequest.com

We Keep the 'c' in codequest Small For a Reason

The small 'c' in our name is to show that we're not some huge software company where our colleagues have no names but recognizable faces, where we take on too many projects and lose focus, and where we learn very little about our clients' needs and what makes them tick.

*codequest is made up of dediacted, hard-working, and friendly developers. We're also small by design, and because we weave this into the fabric of our identity, we make sure each one of us is really on top of their game. You might even say this is what makes us stand out, the fact that we have the tech know-how and deep, hands-on experience in creating **Google Workspace** integrations and **QuickBooks** apps.*
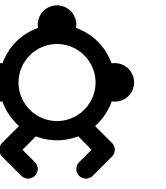

We've been told we are:

niche-focused · light on our feet · customer-oriented

codequest

codequest is a collective of doers, engineers, dreamers, and creatives who take products from zero to one.

We match up really well with companies looking for a technology partner who understands all aspects of running scalable software products.

codequest
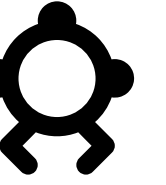

No Goodbyes, Only See You Laters ❤️

That means we don't just deliver your product, dust our hands, and say ¡adiós! We work with you from the Discovery Phase to MVP, all the way to full-scale product launch and after-action reviews.

We support you with customer development by quickly setting up landing pages, content marketing, and analytics - essential tools that really help you hit the ground running. We also manage the product's lifecycle by overseeing upgrades and maintenance.

So if you stick with us to get through this presentation, we might end up standing by you throughout your product development journey, like the most loyal of Hachikō dogs 🐕 You'll also learn about:

- *What makes us different and what we value as a software development agency.*
- *How we nurture our partnerships so they become lasting friendships.*
- *The experience we have working on small to big projects, for startups to large multinationals, from real estate to fintech.*
- *What we specialize in and what our clients have to say about us (I hear they're over the moon, just saying) 😀*
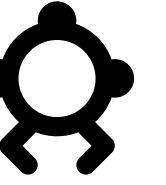

codequest

hello@codequest.com
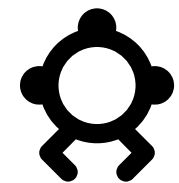

# Here's How We Help You Succeed In Your Market

Extended Development Team

Having a hard time recruiting the right people for your tech projects? Well, guess what? The global talent pool is huge and you can work with all-star engineers and coders from around the world, especially now with remote work becoming the 'new normal.'

At codequest, we've successfully partnered with several companies on complex, long-term projects. Using this 'team extension' approach, we don't re- place your engineers but expand your existing team's capabilities by bringing more hands on deck.

The setup is fast and scalability even faster, all while you save money and keep full control of the development process.
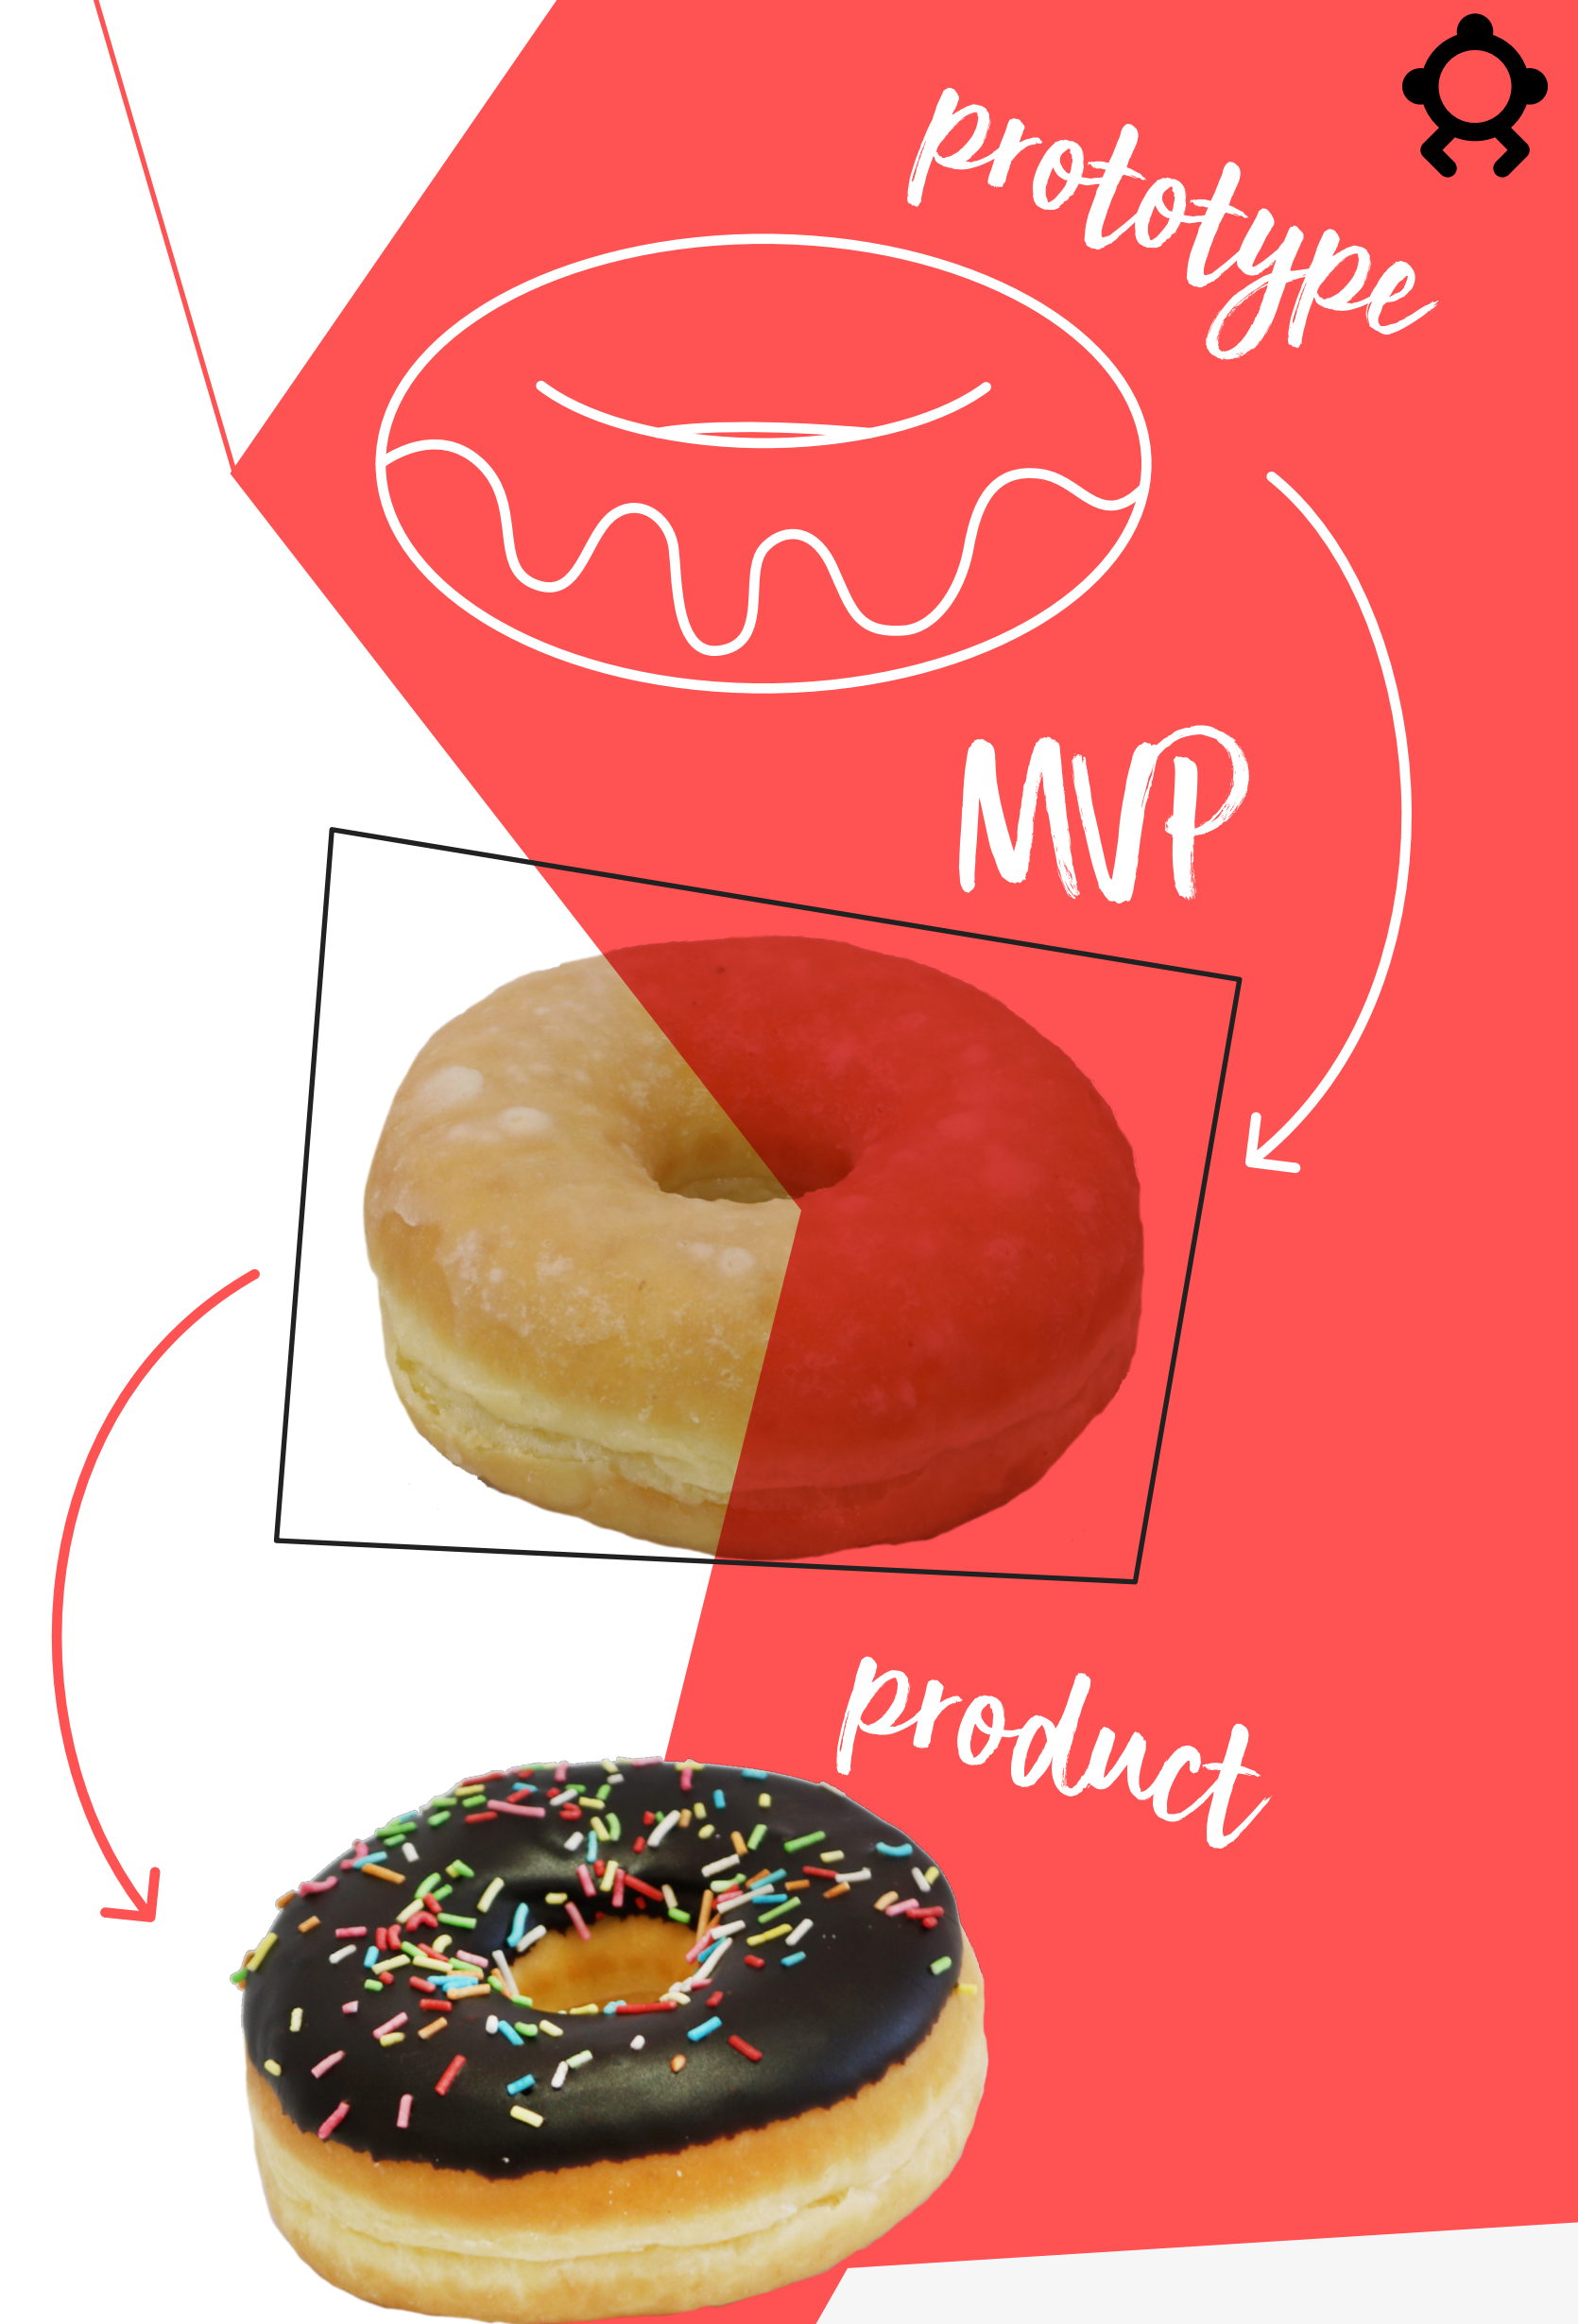

codequest dev
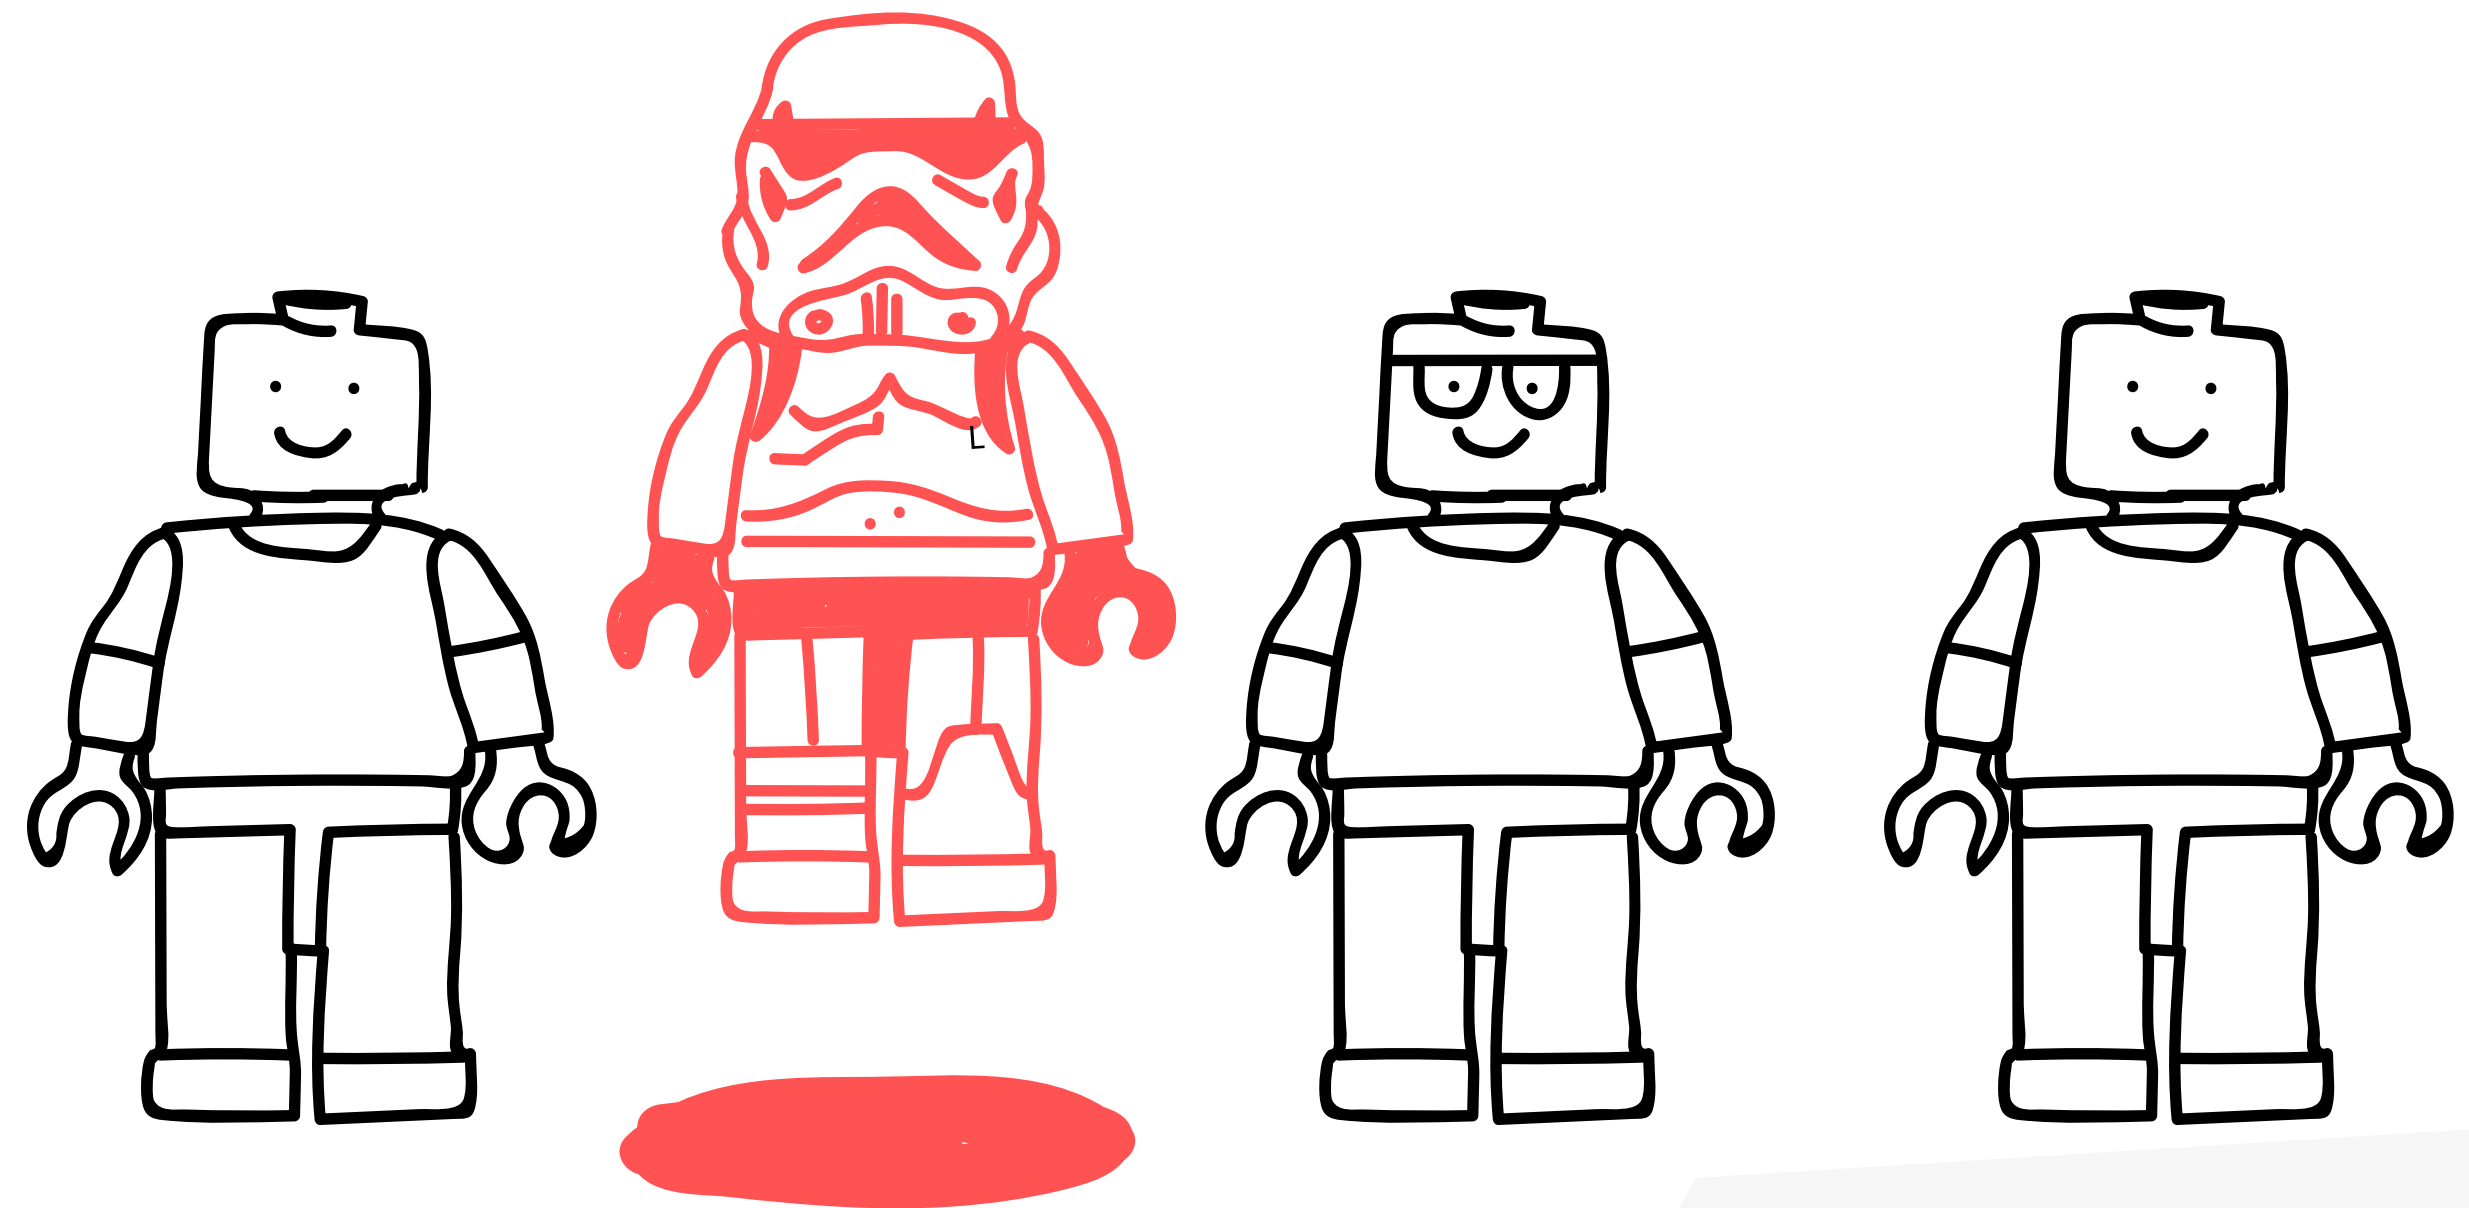

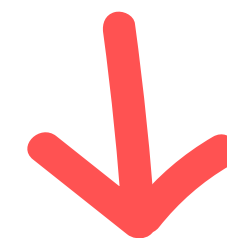

Our Main Services:
Zero to One

Before we start building your app or website, our UX experts sit down with you to flesh out certain details like your goals, expectations, value proposition, and all the important functions you want your app or website to carry out.

During this **Discovery Phase**, we also storyboard user journeys and develop user personas. A Product Manager works with you and serves as the go-between on all things related to the product's iterations' approvals and technical integrity.

A scaled framework allows us to incrementally test the product before launching the **MVP** (Minimum Viable Product), which is a version that quickly hits the market but is constantly improved and adapted to user needs. We also set up a wide array of customer development tools (landing pages, blogs, content) that allow you to analyze your data and generate insights about your users.

We know what it takes to transform your idea into a full-scale, revenue-generating product, and we won't rest until you're satisfied!

hello@codequest.com

Web Development

Our dedicated and experienced team of web developers can create for you any web app from scratch. We develop responsive user interfaces using the latest frontend (React, Angular) and backend (Ruby on Rails, Node.js) technology.

Our approach is to build scalable microservices that are thoroughly tested and rapidly deployed using Docker and AWS (with on-site AWS-certified professionals), all while ensuring the highest level of security.

Let's cross the finish line together!

The chance to test the latest frameworks and tools is a great motivation for a software engineer. codequest really gets that philosophy.

Michał Karwański
CTO @ codequest

hello@codequest.com
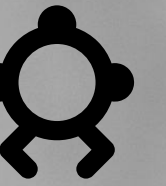

Mobile Development

Half of all mobile users abandon a transaction because of 'poor experience.' That's why at codequest we always aim for highly engaging, standout Android and iOS apps.

We're hard-core, old-school mobile engineers, so our specialty is developing native apps using the best technology (Swift, Kotlin) that captures your users' attention and helps you grow your revenue.

When building an MVP you can solve the same problem in different ways: we use a lot of ready solutions and past experience to increase development speed.

Hanna Dutkiewicz
iOS Team Lead @ codequest

codequest

hello@codequest.com
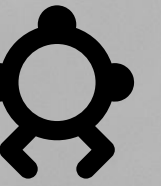

Product Design

From concept and wireframing to usability testing, our UX/UI designers follow a human-centered approach based on the principles of Design Thinking.

With a sense of empathy, we seek to understand user needs and then employ iterations to create innovative solutions.

Design Thinking aims to get prototypes out much faster for testing rather than act on existing assumptions or fall back on conventional business methodologies.

- *Design Sprints*
- *Mobile Design*
- *Web Design*
- *Research and UX Design*
- *Prototyping*

Good, intuitive design is the key to app success. That is why we kick off each new project with the Discovery Phase: an intense workshop focused on design.

Mareta Lakomska
UX/UI Expert & Artist @ codequest

AI & ML Development

Artificial intelligence is going to change the way we interact with the world. For businesses looking to stay ahead of the curve, this means utilizing its capabilities to grow, innovate, and streamline operations like never before.

Our dedicated team of AI/ML experts can develop customized solutions to address your unique business challenges. From natural language processing and computer vision to predictive analytics and generative algorithms, our expertise has both breadth and depth. We excel in training cutting-edge models, performing data analysis, and crafting precise prompts when they are sufficient to meet the needs of our customers.

Let codequest help you unlock new opportunities and drive your business forward.

> *AI has the potential to revolutionize industries, and our mission is to help you harness its power. Our team is committed to delivering cutting-edge solutions that provide a competitive edge and create lasting value.*

Autonomous Drone Development

Our award-winning team excels in both hardware and software development for autonomous drones. With expertise in computer vision and machine learning algorithms, we've helped companies maximize productivity while minimizing safety and operational risks.

Whether it's aerial industrial inspections, environmental monitoring, surveillance, or delivery services, our drones perform complex tasks with precision and reliability in diverse conditions.

Trust us to deliver tailor-made drone solutions that not only meet but exceed your expectations, enhancing your operational capabilities and opening new horizons of possibilities.

> *Our team aims to enhance our drones' ability to perceive, analyze, act, and collaborate with other systems. We are passionate about pioneering innovations that transform drone usage across various industries and address current challenges.*

Jacek Grzybowski

delio

After successfully developing a groceries delivery platform for one of Europe's largest convenience store chains, we were asked to create an online supermarket that would be an industry disruptor. Delio is one of the fastest-growing quick commerce solutions in Poland, and we are proud of all the work we did for them. It's a pleasure to see people in your network use the technology that we put our hearts and souls into building.

What we did:

UX/UI Design, Backend Development

iOS app stats: 4.6 / 5

★★★★⯪
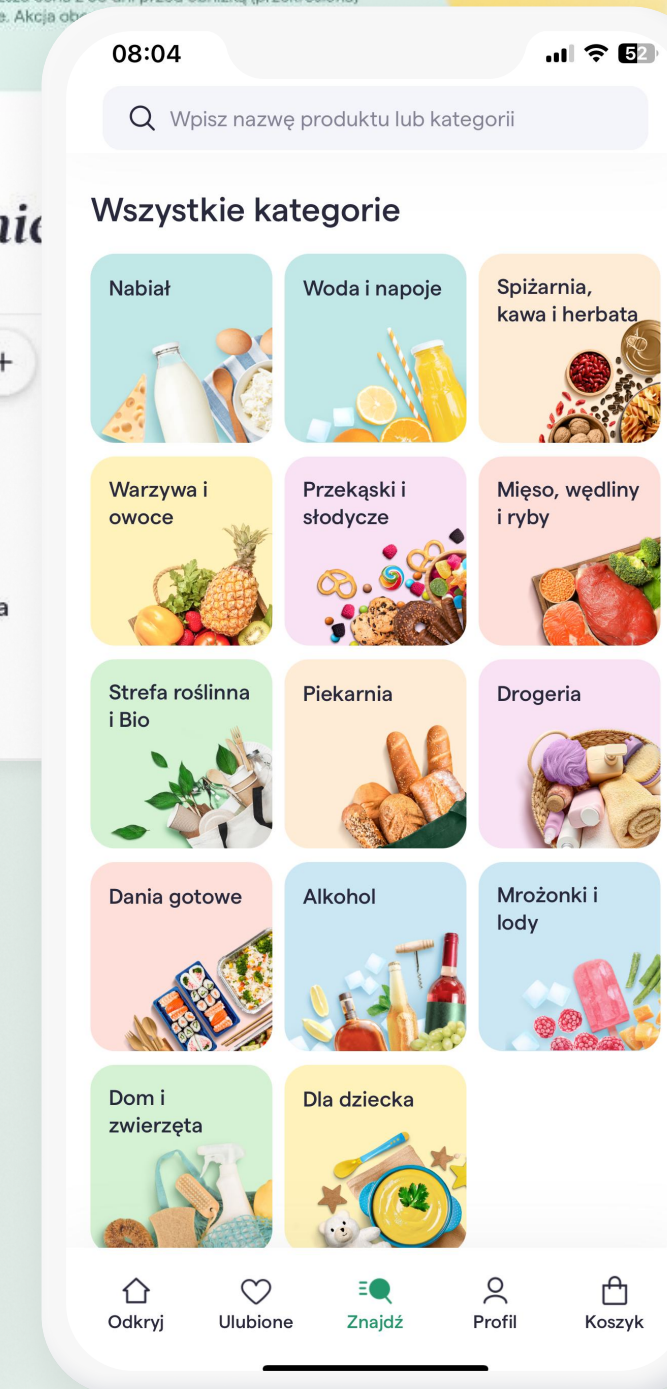

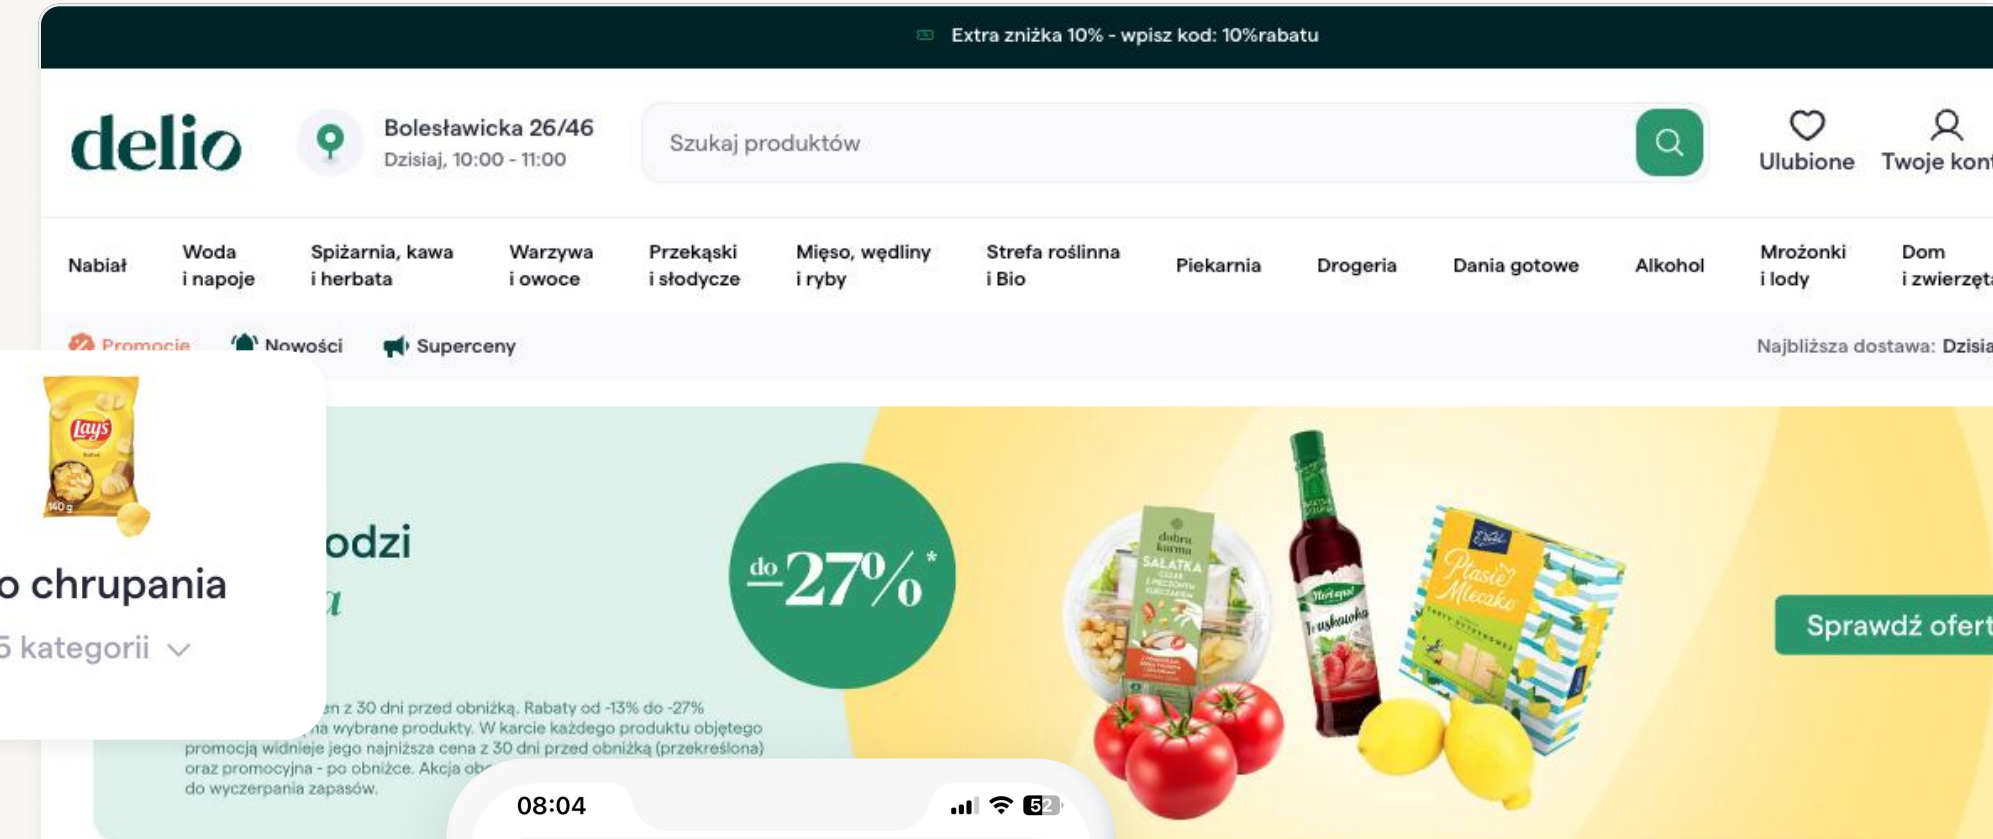

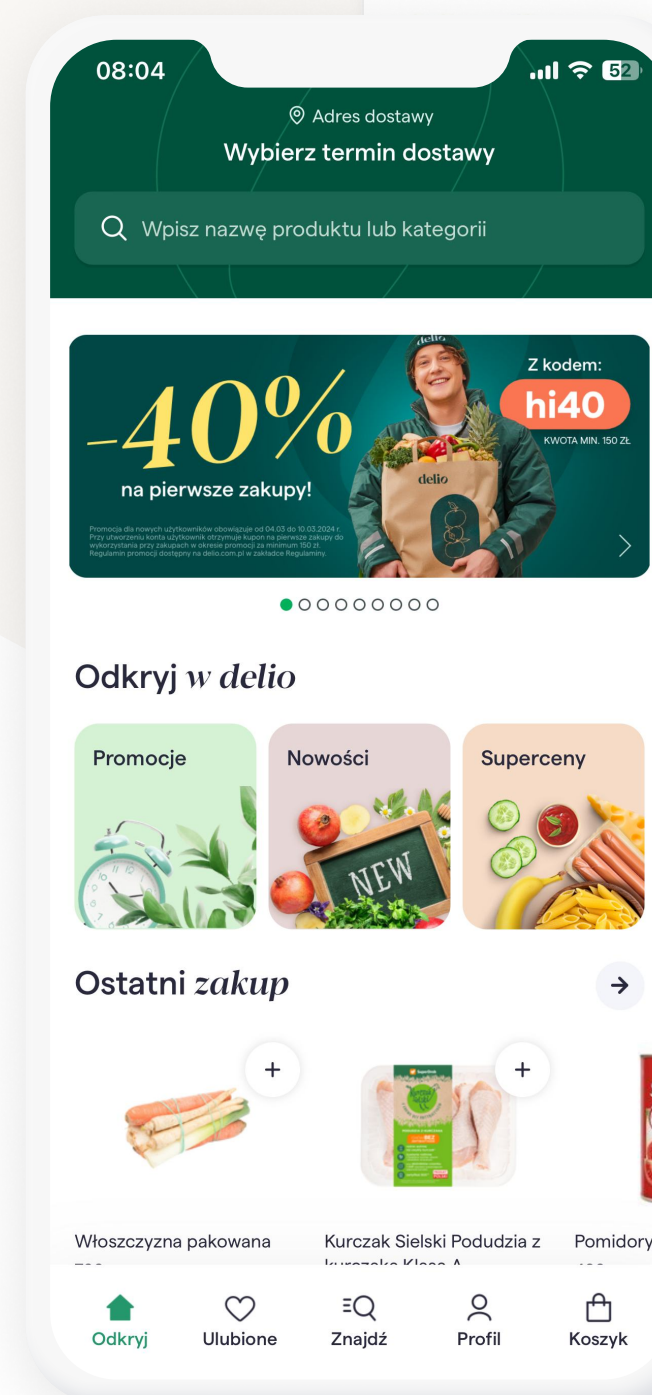

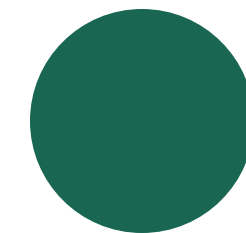

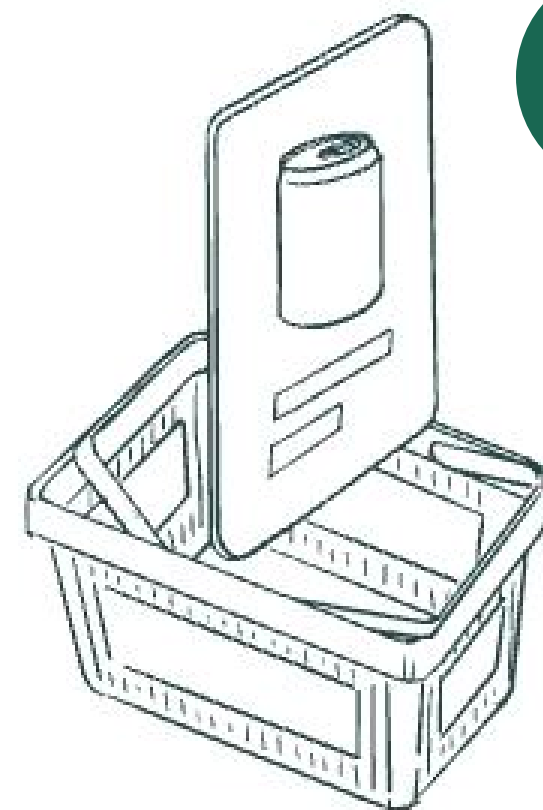

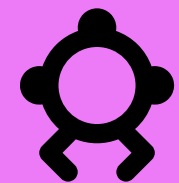

jush!

Q-commerce is leveling up the online purchase and delivery landscape. That's why Lite e-Commerce and Żabka, Poland's largest convenience store chain, approached us to develop their new on-demand, delivery app. The result: JUSH!, and we succeeded in creating the app's UX/UI design, backend, and iOS development. Now your favorite Żabka products are delivered right to your door in under 15 minutes.
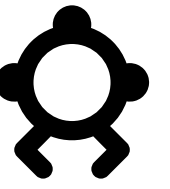

What we did:

The Key to Putting In Good Work

We need to be light on our feet, so we apply the Agile Software Development Method using SCRUM. We also believe that effective communication is key to the successful completion of every project. That's why for every project we:

- **Create a dedicated Slack channel where our clients are always kept in the oop.**
- **Divide work into 2-week sprints. This helps us deliver high-quality work faster and more frequently, and gives us more flexibility to adapt to changes.**
- **Schedule daily standup meetings to maintain a positive dynamic, learn about progress, address challenges, and ensure full transparency.**
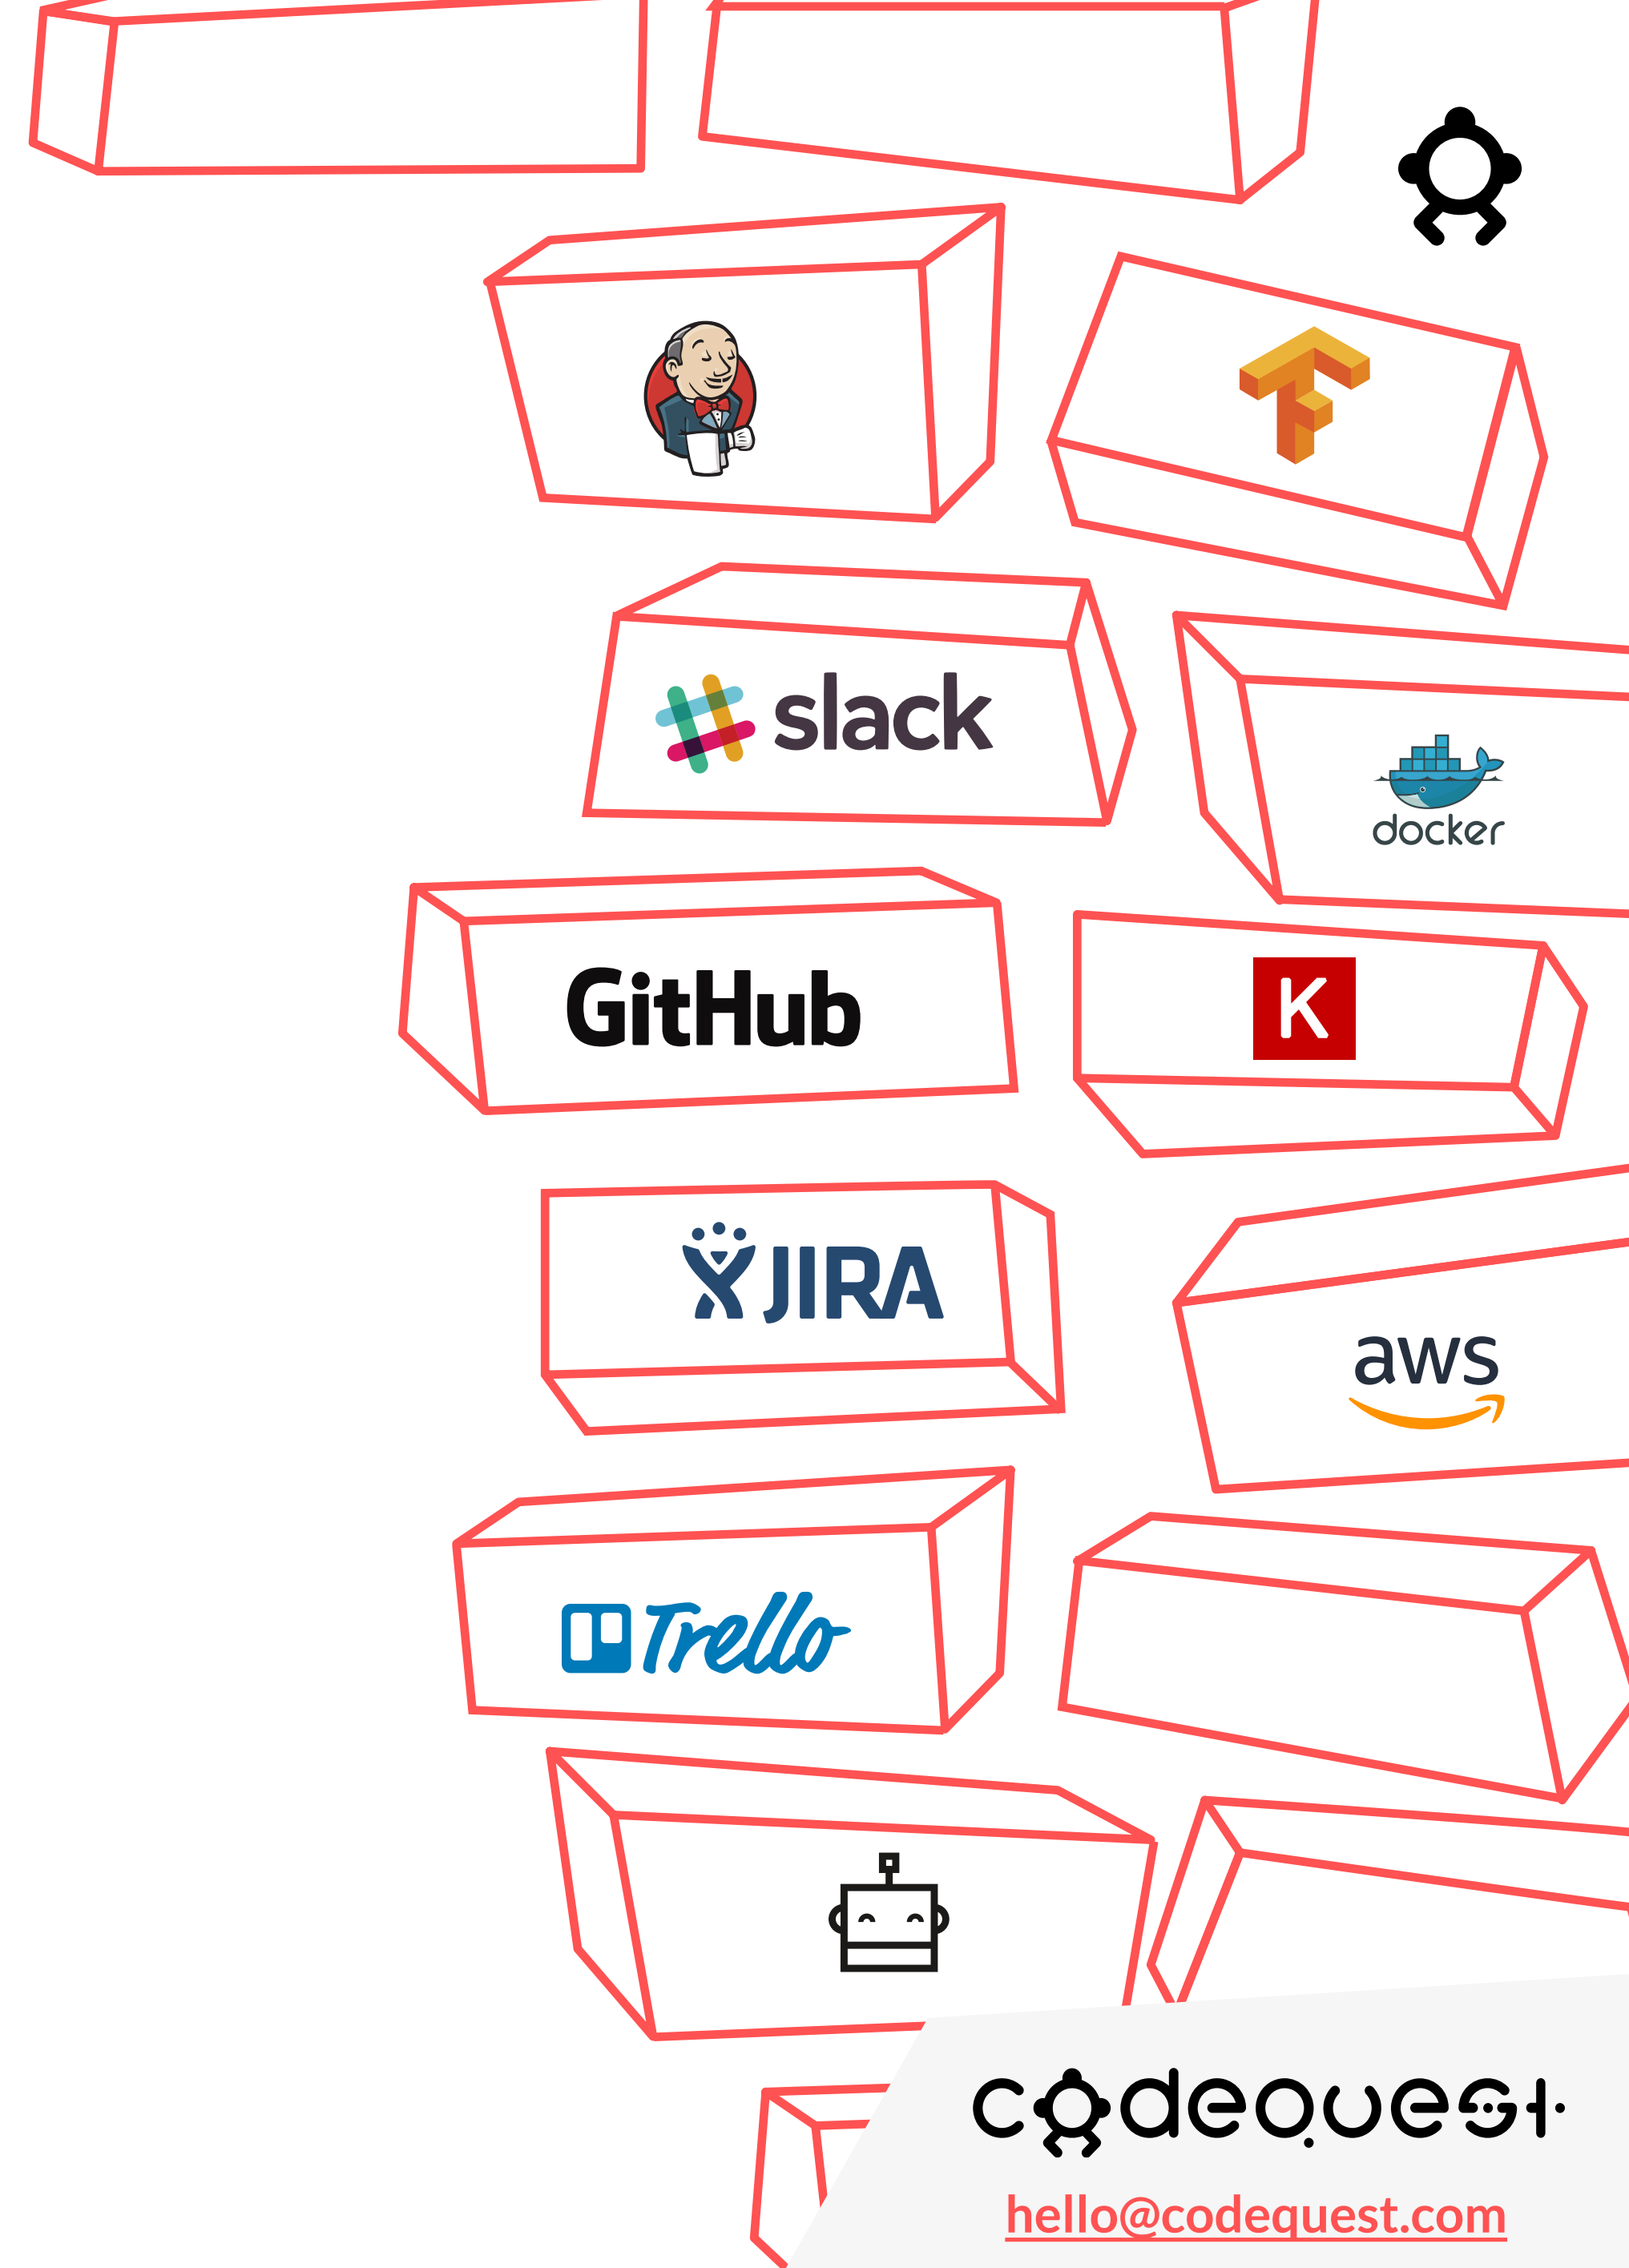

What Makes Us Stand Out?

We Walk Our Talk and Start Our Own Ventures

We're so big on code quality that we built codebeat, our very own SaaS that runs automated code reviews and identifies quick wins in web and mobile applications. MailScreen and SnipMail are also two of our ventures in Google Workspace integrations. So, if you're a startup, we know that feeling, and we'd be more than happy to share with you how we got through the ups and downs of building digital products and putting them on the market.

Hands-on Experience With QuickBooks and Google Workspace

With 12 years in the business and over 70 digital solutions delivered, we've come to realize that our niche lies in developing financial apps for QuickBooks and custom apps that enhance Google Workspace. Our dev team ensures they hit the market fast, are future-proof, and completed using a framework that is agile and flexible.

Full-Cycle Business Development

From seeding ideas and product testing to customer development, we lay the groundwork for your business to flourish. We do this by integrating marketing and sales tools like tracking your product's engagement and assessing metrics. We can also help create branding, pitch decks, fundraising platforms, as well as team support and team building. With added value, a better business outcome!

Your Long-Term Partner, for Better or for Worse

We understand that our main job is to build software for our clients. But that doesn't mean our services stop there. Consider us your informal business partner: we can help you validate a concept, vet ideas, and tell you if there might be a better solution to your problem.
